THESIS ABSTRACT

The aim of this study is to improve the general condition of patients and caregivers by providing necessary training on dysphagia management to the caregivers of stroke patients receiving home care.

In our study, in the intervention group where dysphagia management training was given, caregivers' care burden was lower, their quality of life and dysphagia management information form scores were higher, and the patients' nutritional status was found to be better.

APPLICATION AREAS OF THE THESIS RESULTS

It can be considered as an educational tool in training for caregivers of stroke patients receiving home care.

Forms can be used to evaluate the effectiveness of the training provided.
