[3] Waste (WS)

[3.5] Toxic Waste Treatment

Toxic wastes of the university are collected by licensed companies. Every year Bursa Uludag University makes a contract for the management of the toxic wastes. The above pictures show the first page of the contract (left) between the licensed hazardous waste company (<https://www.ardamtehlikeliatik.com/tr/>) and the university. The image on the right shows the waste reception hall of the waste company.

Hazardous waste collection containers have been placed at the points determined for the controlled collection of hazardous waste at the university.

Description:

Management of (solid/liquid/gaseous) hazardous waste is directed by the waste division of the university. The toxic wastes are collected by the laboratories within the campus. The waste management company (<https://www.ardamtehlikeliatik.com/tr/>) is called when a certain amount of toxic wastes are gathered to take the waste. The company takes the toxic waste and treats it appropriately according to the regulations.

The university's toxic waste management system has been developed. Four Temporary Waste Warehouses (Figure 1 below) have been established for the safe storage of Hazardous Wastes from the laboratories they come from until they are collected from the authorized company.

Figure 1 shows the improved waste collection system. The figures in the plan show the recyclable and organic waste collection points. The numbers highlighted with red triangles are the temporary storage areas (four) for toxic waste.
