[3] Waste (WS)

[3.5] Toxic Waste Treatment

Toxic wastes of the university are collected by licensed companies. Every year Bursa Uludag University makes a contract for the management of the toxic wastes. The above pictures show the first page of the contract (left) between the licensed hazardous waste company (<https://www.ardamtehlikeliatik.com/tr/>) and the university. The image on the right shows the waste reception hall of the waste company.

Description:

Management of (solid/liquid/gaseous) hazardous waste is directed by the waste division of the university. The toxic wastes are collected by the laboratories within the campus. The waste management company (<https://www.ardamtehlikeliatik.com/tr/>) is called when a certain amount of toxic wastes are gathered to take the waste. The company takes the toxic waste and treats it appropriately according to the regulations.

The toxic waste management system of the university is being improved. Four *Temporary Waste Storages* (Figure 1 below) will be established in the following months to safely store the Hazardous Waste received from the laboratories where they are originated until they are picked up from the authorized company.

Figure 1 shows the improved waste collection system that will be implemented in the following months. The numbers on the plan show the recyclable and organic waste collection points. The numbers highlighted with red triangles are the temporary storage areas (four of them) for toxic wastes.
